20 educational technology projects to share \$1.9 million

Enhancing Education Through Technology grants target improving student achievement

MADISON—Twenty projects that will improve student achievement through the use of educational technology will share \$1.9 million in Enhancing Education Through Technology federal grants.

“Today’s students were born in the digital age and must master technology to improve themselves and the world around them,” said State Superintendent Elizabeth Burmaster. “These grants will help educators develop teaching methods and instructional strategies that capitalize on students’ interest in technology and use that familiarity to improve students’ academic performance.”

Each project will help Wisconsin educators develop lessons that require the use of educational technology to meet learning goals. The evaluation process will ensure that students are acquiring 21st century skills such as critical thinking; collaborative problem solving; life and career skills; information, media, and technology skills; as well as higher levels of achievement in core academic subjects. Grants also focus on professional development so that educators develop proficiency in using technology as a teaching and learning tool to support student academic achievement.

“Knowing how to effectively use technology is vital to both students and teachers. These grants will help educators gain the confidence and experience to use technology as a learning tool that improves student academic performance and helps students develop 21st century skills,” Burmaster said.

Collaborative teams of school library media specialists, classroom teachers, and school administrators will work together to build, teach, evaluate, and refine technology-enriched lessons. The goal is to provide professional development and learning communities that focus on integrating instructional technology tools and strategies into daily teaching and learning. The projects will be

(more)

ongoing and aligned with Wisconsin Teacher Standards and National Staff Development Council Standards. Grant staff development activities relate to the state's information and technology literacy standards and the district or districts' combined information and technology plans.

Grants also include data-driven evaluation and a dissemination component to ensure that products and lessons from the projects are shared across the state. The dissemination process may involve publication and virtual professional exchanges, such as an Internet-based clearinghouse or portal, video conferencing, or online mentoring.

Wisconsin's \$4.1 million Enhancing Education Through Technology grant includes funds awarded on a formula basis and \$1.9 million awarded for these competitive grants. Projects serving high-needs schools—schools with a high population of economically disadvantaged students or a school identified for improvement or corrective action under state and federal accountability guidelines—received funding priority. The 20 competitive grants went to one school district and 19 consortium projects and will impact 225 public school districts and two private schools.

"Ensuring that all students have the opportunity to use educational technology bridges the digital divide and is an important part of our New Wisconsin Promise: to provide a quality education for every child and close the achievement gap," Burmaster said.
